Lenze
As easy as that.

Contents of the L-force catalogue

Selected portfolio

Additional portfolio

Lenze makes many things easy for you.

With our motivated and committed approach, we work together with you to create the best possible solution and set your ideas in motion - whether you are looking to optimise an existing machine or develop a new one. We always strive to make things easy and seek perfection therein. This is anchored in our thinking, in our services and in every detail of our products. It's as easy as that!

1

Developing ideas

Are you looking to build the best machine possible and already have some initial ideas? Then get these down on paper together with us, starting with small innovative details and stretching all the way to completely new machines. Working together, we will develop an intelligent and sustainable concept that is perfectly aligned with your specific requirements.

2

Drafting concepts

We see welcome challenges in your machine tasks, supporting you with our comprehensive expertise and providing valuable impetus for your innovations. We take a holistic view of the individual motion and control functions here and draw up consistent, end-to-end drive and automation solutions for you - keeping everything as easy as possible and as extensive as necessary.

3

Implementing solutions

Our easy formula for satisfied customers is to establish an active partnership with fast decision making processes and an individually tailored offer. We have been using this principle to meet the ever more specialised customer requirements in the field of machine engineering for many years.

4

Manufacturing machines

Functional diversity in perfect harmony: as one of the few full-range providers in the market, we can provide you with precisely those products that you actually need for any machine task – no more and no less. Our L-force product portfolio, a consistent platform for implementing drive and automation tasks, is invaluable in this regard.

5

Ensuring productivity

Productivity, reliability and new performance peaks on a daily basis – these are our key success factors for your machine. After delivery, we offer you cleverly devised service concepts to ensure continued safe operation. The primary focus here is on technical support, based on the excellent application expertise of our highly-skilled and knowledgeable after-sales team.

A matter of principle: the right products for every application.

Lenze's extensive L-force product portfolio follows a very simple principle. The functions of our finely scaled products are assigned to the three lines Base-Line, State-Line or High-Line.

But what does this mean for you? It allows you to quickly recognise which products represent the best solution for your own specific requirements.

Powerful products with a major impact:
- Easy handling
- High quality and durability
- Reliable technologies in tune with the latest developments

Lenze products undergo the most stringent testing in our own laboratory. This allows us to ensure that you will receive consistently high quality and a long service life. In addition to this, five logistics centres ensure that the Lenze products you select are available for quick delivery anywhere across the globe. It's as easy as that!

8400 protec

The wall-mounted device with a high degree of integration for complex decentralised systems. It excels through its robust design, high degree of operational reliability and fast installation.

This inverter with a high level of functionality facilitates both basic and servo-based applications. The Inverter Drives 8400 protec is supplied with all modules and interfaces ready to be connected.

On-site diagnostics
- A large display provide constant information on the operating status of the device.
- The clearly laid out LEDs provide additional diagnostics information. The fast diagnostics system thereby makes an effective contribution to increasing system availability.

Decentralised integrated positioning
- Implementing affordable and decentralised positioning applications with asynchronous motors. Whether switch-off, tabular or absolute positioning: the Inverter Drives 8400 protec offers integrated solutions for these applications. The ability to connect incremental and absolute value encoders rounds off this scope of functions.
- The parameters are set conveniently using the "L-force Engineer" here. The range also has a freely editable function block interconnection for integration of logic, arithmetic and mathematic program through graphic programming.

Safety engineering in line with EN ISO 13849-1
- The certified safety system enables not only the connection of local safety elements and safe communication via PROFIsafe, but also a series of safety functions.
- Safe torque off (STO)
- Safe stop 1 (SS1)
- Emergency stop (SSE)
- Safe operation mode selector (OMS)
- Safe enable switch (ES)

Further benefits
- 200% overload current (3s)
- V/f control with and without encoder
- Sensorless vector control
- Servo control
- Short-circuit and earth-fault protected
- DC-injection braking
- S-shaped ramp for smooth acceleration
- Max. output frequency 1,000 Hz
- 15 fixed frequencies
- Standardised connectors
- CANopen, EtherNet/IP, PROFIBUS, PROFINET

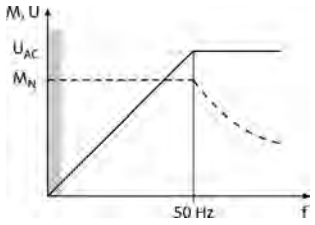
Operating modes

An inverter enables energy-efficient operation of a system in virtually all application cases. The various operating modes, which can be created by making just a few simple settings, facilitate this. The following characteristics and corresponding specifications listed on the following pages can be used to calculate the optimum operating mode during the project planning phase.

Standard setting

In its initial state when delivered, the inverter is set up for basic operation with a three-phase AC motor with V/f control. When operated in this mode, the rated torque of the motor is available in a setting range up to 50 Hz.

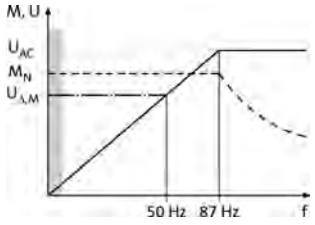
V/f at 50 Hz



Extended setting range up to 87 Hz

If the V/f reference point on the inverter is set to 87 Hz, the rated torque can be used across an extended setting range. Here, a 230/400V motor is for example used and operated in a delta layout with a 400V inverter. The setting range is then increased by 40 %. The inverter must be dimensioned for a rated motor current of 230 V.

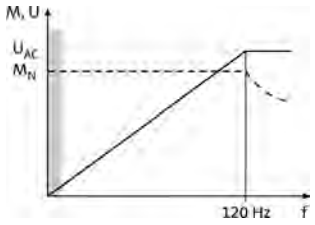
V/f at 87 Hz



Operation with inverter-optimised MF motors

Large setting ranges and optimum operation at the rated torque: these are the strengths of the MF motor when used in combination with an inverter. The motors are optimised for a setting range up to 120 Hz. Compared to conventional 50Hz operation, the setting range increases by 250 %. It is quite simply not possible for a drive to be operated any more efficiently in a machine.

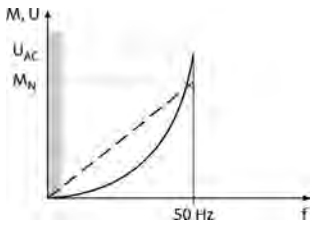
V/f at 120 Hz



Operation with low loads

This operating mode can be used for various applications, e.g. for fans and pumps:
In fan and pump applications, the load behaviour follows a square-law characteristic depending on the speed. Often, an overload capacity of 120% is sufficient. This serves to operate the inverter during operation with increased power, i.e. the inverter can be dimensioned one power size smaller. The square-law characteristic which corresponds to the load behaviour can be set in the inverter.

Square-law characteristic



Operating modes

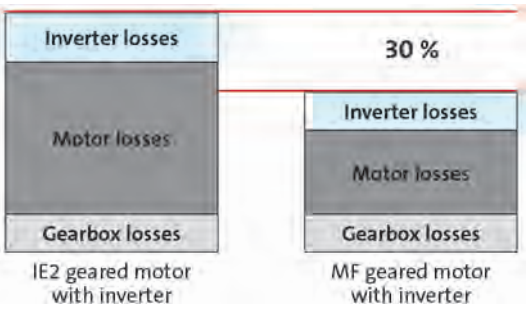
VFC-eco energy saving mode

The Inverter Drives 8400 make energy saving especially easy with the "VFC eco" function. Particularly in the partial load operational range, this function significantly reduces energy requirements. Combined with the new L-force MF three-phase AC motors, this drive solution impresses with the maximum energy efficiency of a Lenze BlueGreen solution.

The "VFC eco" mode adjusts the magnetising current of a motor intelligently to actual requirements. This is particularly useful in partial load operational range, as this is precisely where three-phase AC motors need to be supplied with a greater magnetising current than the operating conditions actually require. The "VFC eco" mode allows losses to be reduced so much that savings of up to 30% can be achieved.

Energy efficiency can then be increased even further with the MF three-phase AC motors. These motors have been specifically designed for operation with frequency inverters. They operate at 120 Hz instead of 50 Hz, as 4-pole three-phase AC motors are at their most efficient at this frequency.

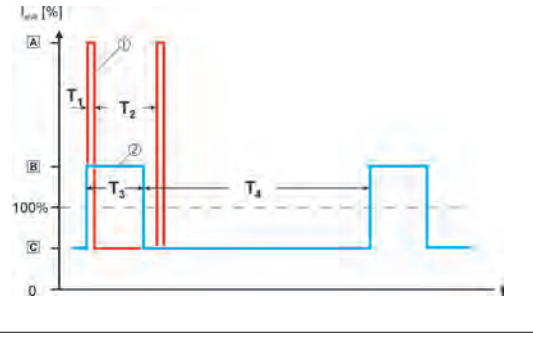
VFC-eco energy saving mode



Overcurrent operation

The inverters can be driven at higher amperages beyond the rated current if the duration of this overcurrent operation is time limited. Two utilisation cycles with a duration of 15 s and 180 s are defined. Within these utilisation cycles, an overcurrent is possible for a certain time if afterwards an accordingly long recovery phase takes place. For both utilisation cycles, a moving average is determined separately. The adjacent diagram shows both cycles: 15 s in red and 180 s in blue. The overload times t_{ol} are 3 s (T_1) and 60 s (T_3) respectively, the corresponding recovery times t_{re} are 12 s (T_2) and 120 s (T_4) respectively. The following tables show the resulting maximum output currents. Monitoring of the device utilisation (I x t) activates the set error response (trip or warning if one of the two utilisation values exceeds the limit of 100 %.

Overcurrent operation



Switching frequencies

On an inverter, the term "switching frequency" is understood to mean the frequency with which the input and outputs of the output module (inverter) are switched. On an inverter, the switching frequency can generally be set to values between 2 and 16 kHz, whereby the selection is based on the respective power output.
Since losses (in the form of heat) can be generated when switching the modules, the inverter can provide a higher output current at a switching frequency of 2 kHz. In addition to this, it is also important to differentiate between operation at a fixed switching frequency and a variable switching frequency, whereby the switching frequency is automatically reduced based on the output current here.
The data for operation at increased output is permitted for operation at a switching frequency of 2 or 4 kHz and in an ambient temperature of max. 40 ^{0} C.

4.1

Motor connection

- Keep motor cables as short as possible, as this has a positive effect on the drive behaviour.
- With group drives (multiple motors on one inverter), the resulting cable length is the key factor. This can be calculated using the hardware manual.
- Electric strength of the motor cable: 1 kV as per VDE 250-1.

Memory module

All drive settings for the 8400 are stored on the memory module, which is a pluggable memory chip. The memory module ensures that drives can be replaced quickly and without errors being made.

Mode	Features	Product key
Memory module	• For 8400 StateLine, HighLine, Topline and protec • Packaging unit: 5 items	E84AYM10S/M

Safety engineering

The following safety functions are integrated into the communication modules depending on the device version:

Safety option 10
- Safe torque off (STO)

- The drive is safely disconnected when a request is sent via connected active or passive sensors

Safety option 20
- Safe torque off (STO)
- Safety stop 1 (SS1)
- Safe stop emergency (SSE)
- Safe operation mode selector (OMS)
- Safe enable switch (ES)

- The drive is safely disconnected by a higher-level safety PLC by means of PROFIsafe/PROFINET

Safety option 30
- Safe torque off (STO)
- Safe stop 1 (SS1)
- Safe stop emergency (SSE)
- Safe operation mode selector (OMS)
- Safe enable switch (ES)

- The drive is safely disconnected by a higher-level safety PLC by means of PROFIsafe/PROFINET and via connected active or passive sensors

Communication modules

Inverter Drives 8400 protec are supplied with permanently installed communication modules. As well as containing the components for fieldbus communication, these modules also include the digital inputs and outputs. An analog input or a synchronous serial interface (SSI) can also be provided as an option.

Overview

	Digital inputs	Digital outputs	Analog inputs
Communication module	Number	Number	Number
CANopen	6 or 4 (configurable)	0 or 2 (configurable)	1 [1)]
EtherNet/IP	6 or 4 (configurable)	0 or 2 (configurable)	1 [1)]
PROFIBUS	6 or 4 (configurable)	0 or 2 (configurable)	1 [1)]
PROFINET	6 or 4 (configurable)	0 or 2 (configurable)	1 [1)]

[1)] Or as a synchronous serial interface (SSI).

Communication module: CANopen

The CANopen communication module allows the 8400 protec to be controlled via the "CANopen" bus system using digital control signals. It is integrated in the inverter with the product key E84D□□□□□□□□C.

The benefits of this system include:
- Easy, yet very powerful bus system
- Easy system integration, as a wide range of sensors and actuators is available in the market.

EtherNet/IP communication module

The EtherNet/IP communication module based on standard TCP and UDP enables the Inverter Dives 8400 motec to support a continuous communication from the field level right through to the controlling system. The product key E84D□□□□□□□□□G
indicates an inverter with an integrated communication module
The benefits of this system include:

- Currently widespread fieldbus based on real-time Ethernet
- Supports DHCP and BootP in allocating the IP address
- Devices linked via EtherNet/IP can be implemented seamlessly and with minimum configuration expense via mapping into the I/O tree of the RSLogix programming tool

Mode	Features

PROFIBUS communication modules

With the PROFIBUS communication module, the 8400 protec supports the most widespread current fieldbus system. It is integrated in the inverter with the product key E84D□□□□□□□□P.

The benefits of this system include:
- Widespread and very powerful fieldbus system
- Integrated I/O node. Capable of communication and reading inputs even when the 400V supply is switched off.

Mode	Features

PROFINET communication modules

With the PROFINET communication module, the 8400 protec supports a fieldbus system for continuous communication from the field level right through to company management level. It is integrated in the inverter with the product key E84D□□□□□□□□R.

The benefits of this system include:
- Fieldbus system capable of handling large data volumes
- Use of IT standards
- Integrated switch allows direct looping of PROFINET via the inverters
- Integrated I/O node. Capable of communication and reading inputs even when the 400V supply is switched off.

Mode	Features

Brake resistors

An external brake resistor is required to brake high moments of inertia or in the event of prolonged operation in generator mode; this resistor converts braking energy into heat.

The brake resistors recommended in the table below have been dimensioned for approx. 1.5 times the regenerative power, with a cycle time of 15/135 s (brake/rest ratio). These brake resistors generally meet the usual requirements of standard applications.

The brake resistors are fitted with a thermostat (potential-free NC contact).

USB diagnostic adapter

The operation, parameter setting and diagnostics of the Inverter Drives 8400 and the Servo Drives 9400 via the L-force diagnostics is made with the keypad X400 or a PC. The connection of a PC can be made via a USB interface and the USB diagnostic adapter.

For connecting the USB diagnostic adapter with the L-force diagnostics interface (DIAG) tat the inverter, three different connecting cables are separately available in the lengths 2.5 m, 5 m and 10 m. The connection can be established during operation. The engineering tools EASY Starter or Engineer can be used to carry out the operation, parameter setting or diagnostics of the inverters. Both tools have simple intuitive surfaces. This enables a quick and easy commissioning.

Optionally to the USB diagnostic adapter, the PC system bus adapter can be used. For this purpose, a CANopen interface must be available at the inverter.

USB diagnostic adapter incl. connecting cable to the PC

4.1

► The engineering tools EASY Starter or Engineer are used for operation, parameter setting and diagnostics of the inverters.

Mode		Features	Product key
USB diagnostic adapter		• Input-side voltage supply via USB connection on PC • Output-side voltage supply via inverter's diagnostic interface • Diagnostic LEDs • Electrical isolation of PC and inverter • Hot-pluggable	E94AZCUS

Connecting cables for USB diagnostic adapter

Mode	Features	Product key
Connecting cable for USB diagnostic adapter	• Length: 2.5 m	EWL0070
	• Length: 5 m	EWL0071
	• Length: 10 m	EWL0072

Diagnosis terminal

The diagnosis terminal can be used as an alternative to a PC if you are looking for an easy way to operate the inverter, set parameters or carry out diagnostics locally. The structured menus and plain text display provide quick access to data.
The diagnosis terminal can be plugged into the inverter's L-force diagnostic interface (DIAG) from the outside.

Diagnosis terminal

Mode	Features	Slot	Product key
Diagnosis terminal	• Diagnosis terminal inside robust housing • incl. 2.5 m cable • Degree of protection IP20 • For 8400 motec and protec.	DIAG	EZAEBK2003

Switch/potentiometer unit

The switch/potentiometer unit is fitted directly to the 8400 motec or in a different position within the system. An analogue setpoint can be specified with the switch/potentiometer unit and the control connections integrated in the inverter by using the integrated potentiometer; the rotary switch can, for example, be used to start/stop the drive or change the direction of rotation.
The switch/potentiometer unit is supplied with a 2.5 m connection cable.

Switch/potentiometer unit

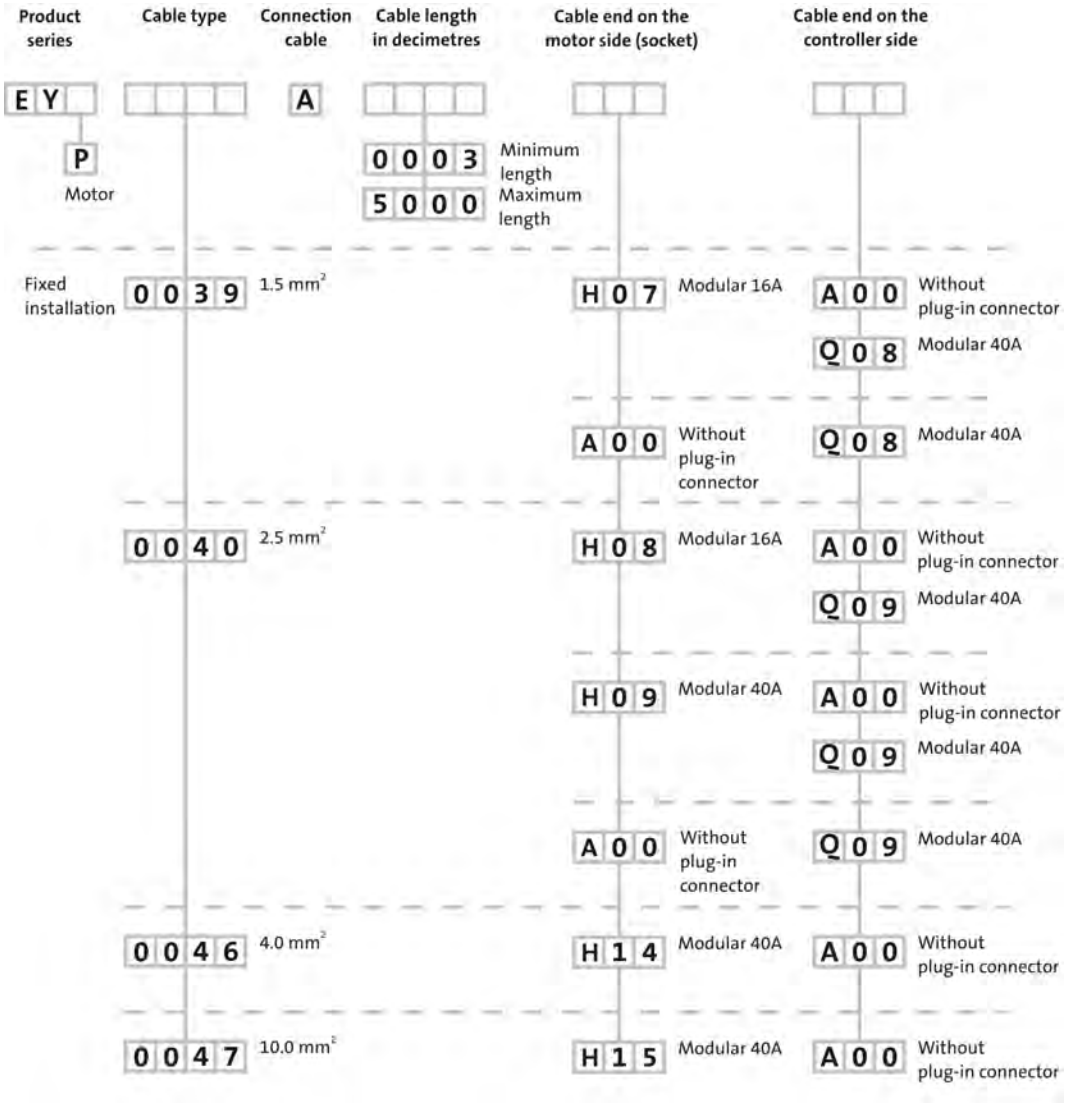
Mode	Product key
Switch/potentiometer unit (IP65)	E82ZBU

System cables

For connection of the motor, Lenze provides finished hybrid cables. They are optimally matched to the connection between the Drive Package components. Motor connection, blower connection, brake connection and temperature monitoring are integrated in the cables. Cables up to a length of 100 m can be selected in increments of 0.1 m.

10-pole cables

Available with cross-sections 1.5^2 and 2.5^2 with connection for brake or thermal contact.



8-pole cables

Available with cross-sections 1.5[2] and 2.52 [2] with connection for brake and thermal contact.

8400 motec

The Inverter Drives 8400 motec excel through the greatest possible user-friendliness during operation and installation.

Particularly when used for decentralised drive solutions, the Inverter Drives 8400 motec are able to demonstrate their exemplary efficiency with regard to space, time and energy.

Space savings
- Integrated safety technology and fieldbus communication tailored to individual requirements
- The modular structure minimises your spares inventory

Time benefits
- Reduction in mounting and installation times thanks to the pluggable connection system: "Unpack, connect and you're done!"
- Easy replacement of the memory module facilitates standard set-up and increases availability

Energy efficiency
- "VFC eco" mode offers intelligent adaptation of the magnetising current.
- Energy savings of up to 30% in partial load operational range are possible

Further benefits
- 200 % overload current (3s)
- V/f control with and without encoder
- Sensorless vector control
- Short circuit and earth fault proof
- DC-injection braking
- S-ramps for smooth acceleration
- Max. output frequency 300 Hz
- CANopen, PROFIBUS, PROFINET, EtherCAT®, EtherNet/IP and AS-Interface
- Safety function STO

Wonderfully simple
- Large LED ensures that operating status is clearly visible from a distance; blinking informs users as to error causes.

Mechanically and electrically robust
- Thanks to the high degree of protection (IP65), ideally suited for use in the harshest environments.

A win for decentralised applications
- The 8400 motec meets all requirements of a modern, universally deployable and cost-efficient motor inverter. This makes it ideally suited for decentralised duties in the field of intralogistics, such as at airports or distribution centres.

Inverter Drives 8400 motec as motor version

Inverter Drives 8400 motec as wall-mounted version (Field Package)

Inverter Drives 8400 motec as wall-mounted version (Field Package) with main and service switch

The combinable units

The modular, sophisticated design of the 8400 motec, which comprises the “Drive Unit”, “Communication Unit” and “Wiring Unit”, shows how flexible this drive is. After selecting which units you want, you can order three different versions of the 8400 motec:

- **Drive package**
  The 8400 motec is delivered mounted on a Lenze geared motor/ three-phase AC motor.
- **Motor mounting set**
  The 8400 motec can be mounted on the motor via different wiring units (depending on the motor frame size) with four screws.
- **Field package with/without switch**
  The 8400 motec can be mounted on a wall/machine frame using screws. The type ‘with switch’ features a frame unit with a main switch and control elements.

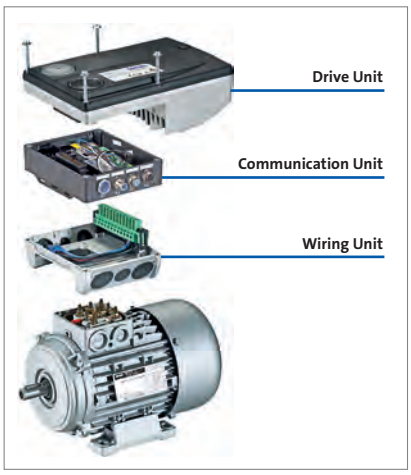
When the units are individually ordered, they are delivered in separate packages.

Drive Unit
- Inverter power section
- Easy commissioning via DIP switch, potentiometer or diagnosis terminal
- Easy to replace memory module
- A large LED display to show statuses

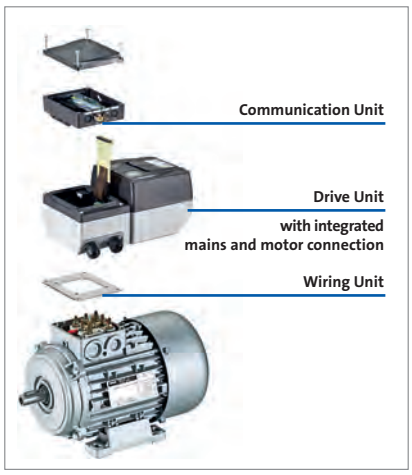
Communication Unit
- Interface for I/Os and fieldbus links
- AS-Interface, CANopen, EtherCAT®, Ethernet/IP, PROFIBUS or PROFINET
- I/Os and on-board safety technology
- Pluggable M12 connection system

Wiring Unit and Frame Unit
- Connections to mains and drive
- Flexible connection options such as cable glands and diverse plug-in connectors
- Connection for brake resistor
- Connection for spring-applied brake

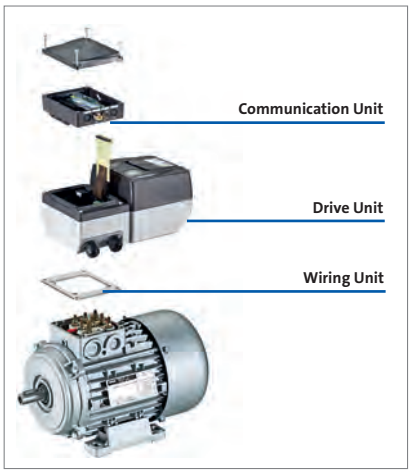
Motor mounting set



8400 motec 0.37 ... 3.0 kW

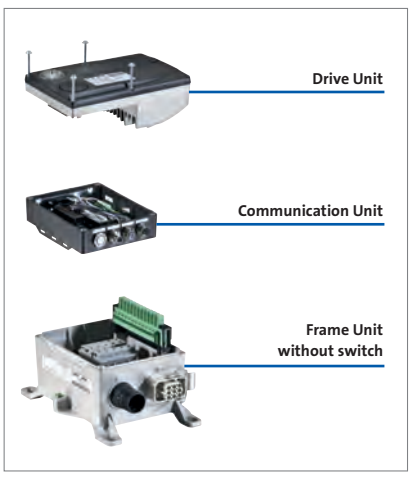


8400 motec 4.0 ... 7.5 kW

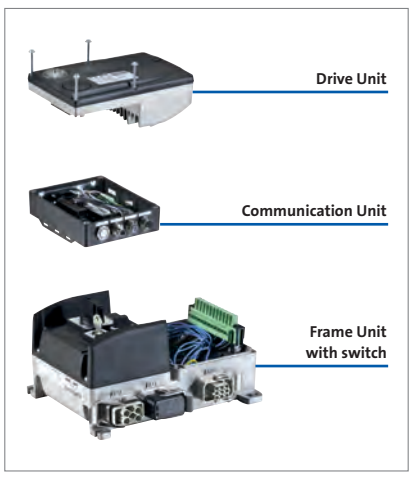


8400 motec 4.0 ... 7.5 kW

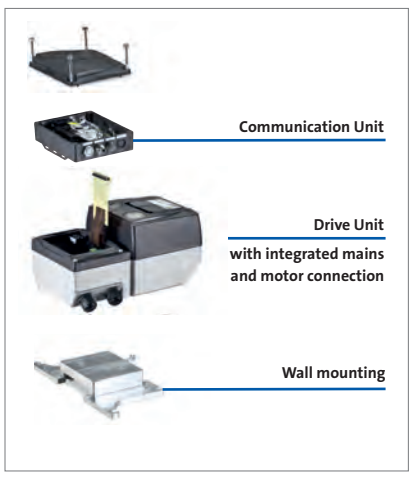
Field package



8400 motec field package without switch
0.37 ... 3.0 kW



8400 motec field package with switch
0.37 ... 3.0 kW



8400 motec field package without switch
4.0 ... 7.5 kW

Drive Unit

On the underside of the drive unit, there is the power section. Here, there are also several DIP switches and potentiometers that enable configuration, speed and ramp settings to be made. In this way, the drive unit can be quickly and easily matched to the equipment in question.

For the purpose of diagnostics, you can plug in a diagnostic adapter alongside the status display without having to remove the drive. Thanks to the potentiometer that can be accessed from above, you can make speed settings while the motor is actually running.

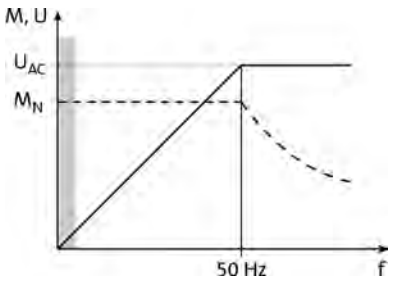
Operating modes

An inverter enables energy-efficient operation of a system in virtually all application cases. The various operating modes, which can be created by making just a few simple settings, facilitate this. The following characteristics and corresponding technical specifications listed on the following pages can be used to calculate the optimum operating mode during the project planning phase.

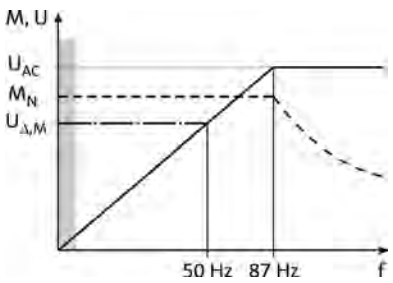
Standard setting
In its initial state when delivered, the inverter is set up for basic operation with a three-phase AC motor with V/f control. When operated in this mode, the rated torque of the motor is available in a setting range up to 50 Hz.

V/f at 50 Hz



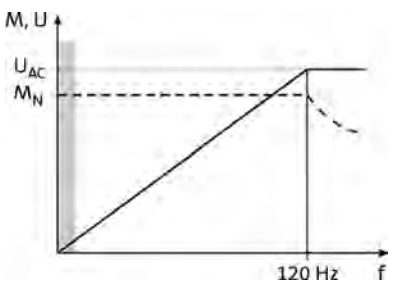
Extended setting range up to 87 Hz
If the V/f switchover point on the inverter is set to 87 Hz, the rated torque can be used across an extended setting range. Here, an e.g. 230/400 V motor is used and operated in a delta layout with a 400 V inverter. The setting range is then increased by 40 %. The inverter must be dimensioned for a rated motor current of 230 V.

V/f at 87 Hz



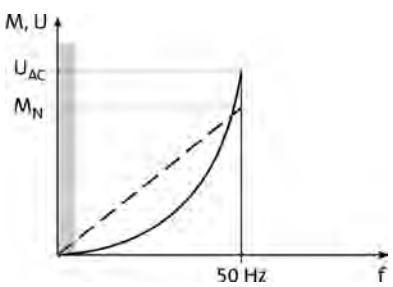
Operation with inverter-optimised MF motors
Large setting ranges and optimum operation at the rated torque: these are the strengths of the MF motor when used in combination with an inverter. The motors are optimised for a setting range up to 120 Hz. Compared to conventional 50 Hz operation, the setting range increases by 250 %. It is quite simply not possible for a drive to be operated any more efficiently in a machine.

V/f at 120 Hz



Operation with low loads
This operating mode can be used for various applications, e.g. for fans and pumps:
In fan and pump applications, the load behaviour follows a square-law characteristic depending on the speed. Often, an overload capacity of 1.2 x is sufficient. This serves to operate the inverter during operation with increased power, i.e. the inverter can be dimensioned one power size smaller. The square-law characteristic which corresponds to the load behaviour can be set in the inverter.

Square-law characteristic



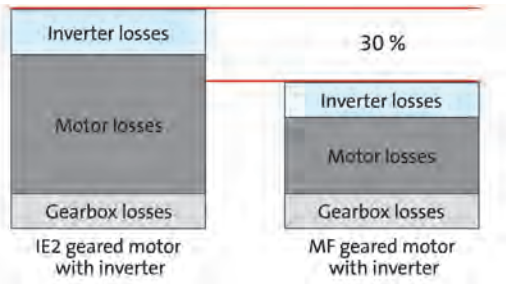
Operating modes

Energy saving mode VFC-eco
The Inverter Drives 8400 make energy saving especially easy with the "VFC eco" function. Particularly in the partial load operational range, this function significantly reduces energy demand. Combined with the new L-force MF three-phase AC motors, this drive solution impresses with the maximum energy efficiency of a Lenze BlueGreen solution.

The “VFC eco” mode adapts the magnetising current of a motor intelligently to meet actual needs. This is particularly useful in partial load operational range as this is precisely where three-phase AC motors need to be supplied with a greater magnetising current than the operating conditions actually require. The "VFC eco" mode allows losses to be reduced so much that savings of up to 30 per cent can be achieved.

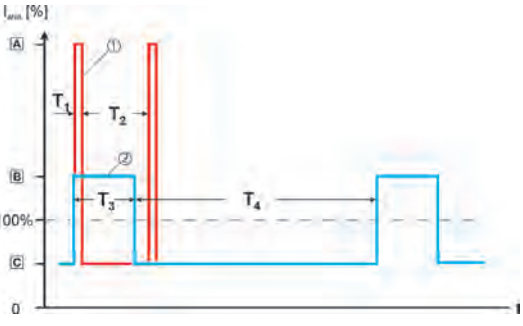
Energy efficiency can then be increased even further with the MF three-phase AC motors. These motors have been specifically designed for operation with frequency inverters. They operate at 120 Hz instead of 50 Hz, as 4-pole three-phase AC motors are at their most efficient at this frequency.

Energy saving mode VFC-eco



Overcurrent operation
The inverters can be driven at higher amperages beyond the rated current if the duration of this overcurrent operation is time limited. Two utilisation cycles with a duration of 15 s and 180 s are defined. Within these utilisation cycles, an overcurrent is possible for a certain time if afterwards an accordingly long recovery phase takes place. For both utilisation cycles, a moving average is determined separately. The adjacent diagram shows both cycles: 15 s in red and 180 s in blue. The overload times are 3 s (T1) and 60 s (T3) respectively, the corresponding recovery times are 12 s (T2) and 120 s (T4) respectively. The following tables show the resulting maximum output currents.
Monitoring of the device utilisation (I x t) activates the set error response (trip or warning) if one of the two utilisation values exceeds the threshold of 100 %.

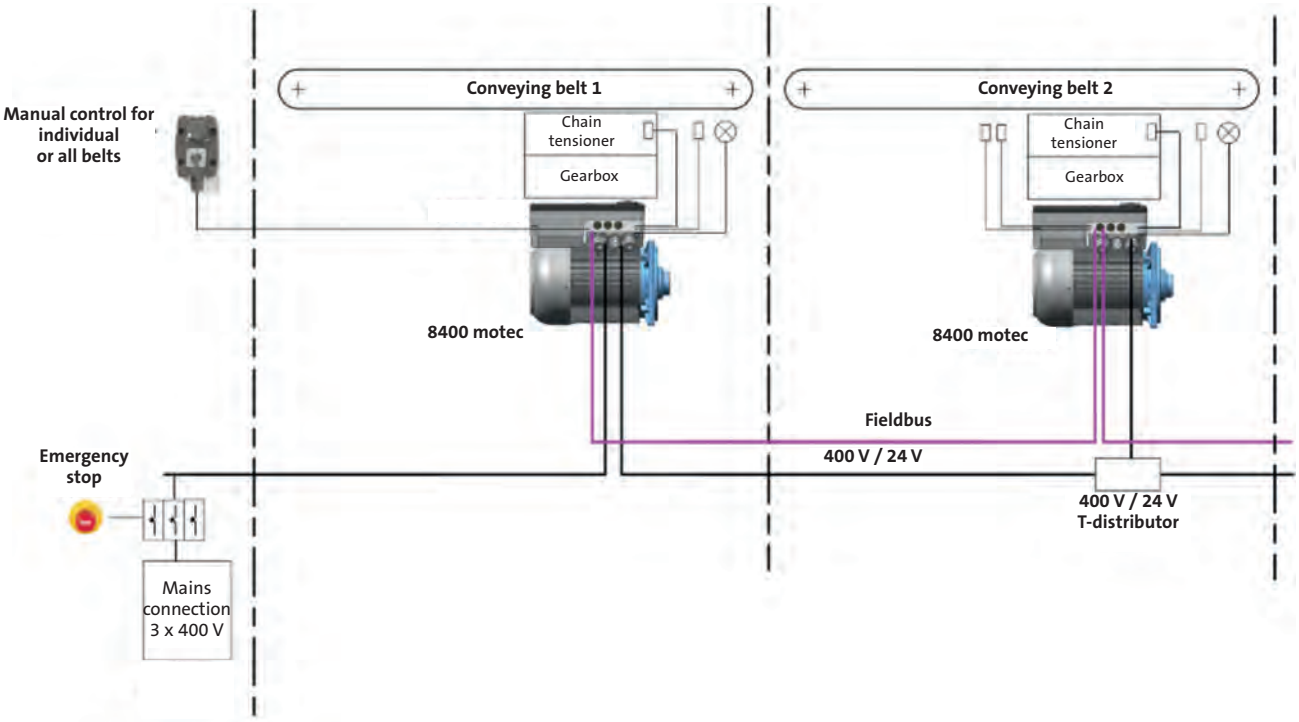
Overcurrent operation



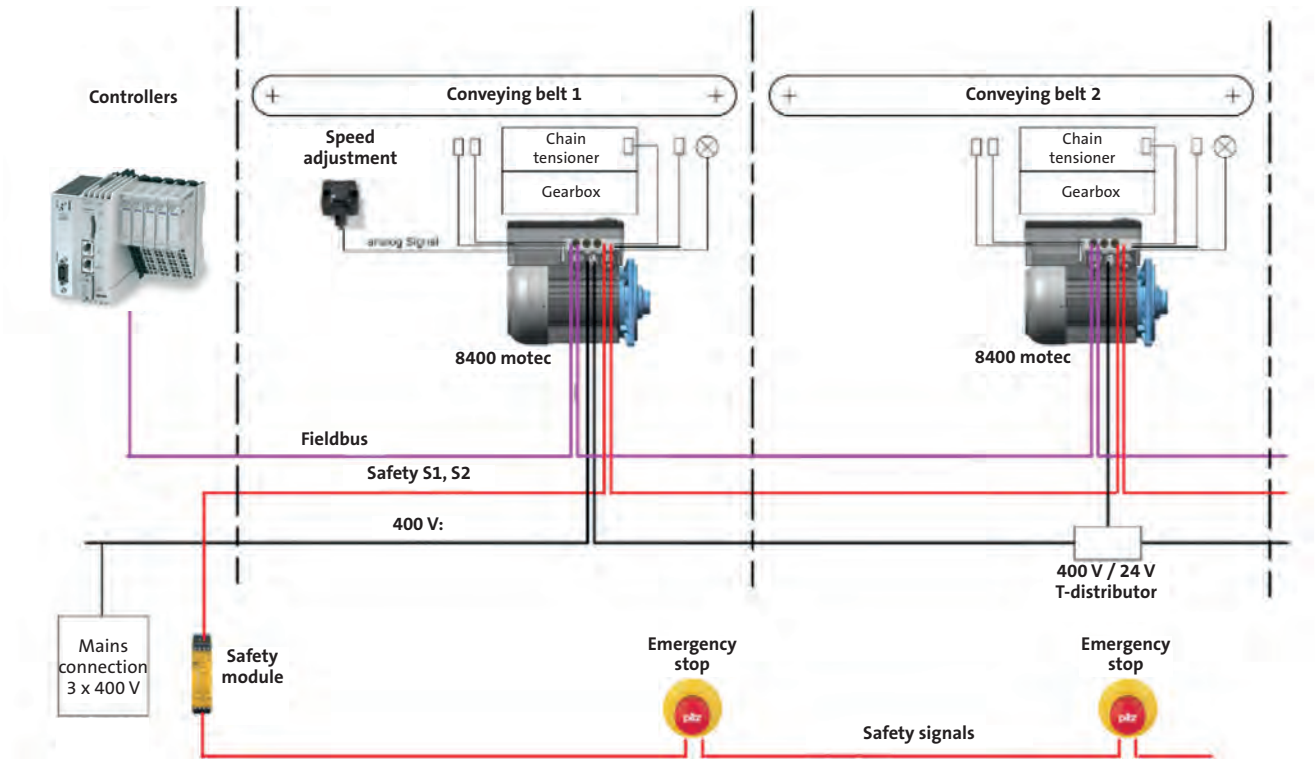
Switching frequencies
In the case of an inverter, the term "switching frequency" is understood to mean the frequency with which the output modules (inverters) are switched on an off.

The switching frequency on the 8400 motec can be set to values between 4 and 16 kHz; the selection depends on the output. Since losses in the form of heat can be generated when switching the modules, the inverter can provide a higher output current at a switching frequency of 2 kHz.
In addition to this, it is also important to differentiate between operation at a fixed switching frequency and a variable switching frequency, whereby the switching frequency is automatically reduced based on the output current here. The data for operation at increased output is permitted for operation at a switching frequency of 2 or 4 kHz and at an ambient temperature of max. 40 0 C.

Topologies for decentralised drive technology



Extension of safety technology



Application example whole system

Lenze components can be used to create an entire compact decentralised drive solution within the overall interconnected system.

Mains operation:
The IE1, IE2 and IE3 three-phase geared motors and the Lenze Smart Motor m300 in combination with the g500 gearboxes.

Inverter operation:
The various three-phase geared motors in combination with the 8400 motec inverter for motor and wall mounting and the 8400 protec for wall mounting.
Easy and clear wiring via terminal boxes or plug-in connectors ensure safe operation and a high level of service safety.

Mains connection

- The data given for mains fuses and cable cross-sections is intended for a mains connection of 3 x 400 V for individual connection.
- Fuse of gG/gL utilisation category or semiconductor fuses of gRL utilisation category.
- The cable cross-sections apply to PVC-insulated copper cables.
- Use for installation with UL-approved cables, fuses and brackets.

Motor connection

- Keep motor cables as short as possible as this has a positive effect on the drive behaviour.
- With group drives (multiple motors on one inverter), the resulting cable length is the key factor. This can be calculated using the hardware manual.
- Electric strength of the motor cable: 1 kV according to VDE 250-1.

Communication Unit

The communication modules support the following functions:
- Control of inverters via digital and analogue signals
- Control of the inverter via the fieldbus systems
- Support for “safe torque off” functionality
- Connection options for sensors and actuators
- The sensors can be powered by the internal 24V supply
- Connection options via cable glands and M12 connectors. A total of up to 8 screwed connections / plugs can be used. Based on their function, the individual communication units are equipped with the corresponding connections as standard.

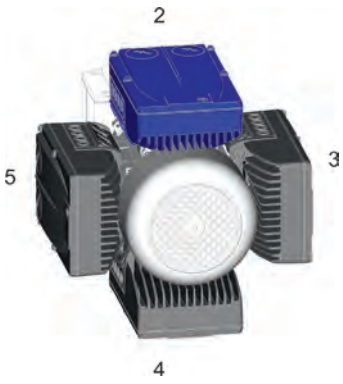
General technical data

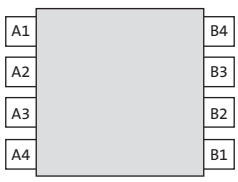
Mode	
Product	8400 motec
Analog inputs	
	Switchable: voltage or current input
Resolution	10 Bit
Value range	0 ... 10 V, 0/4 ... 20 mA
Digital inputs	
Switching level	SPS (IEC 61131-2)
Function	Parameterisable
Digital outputs	
Switching level	SPS (IEC 61131-2)
Max. output current	50 mA
Function	Parameterisable
Relay	
Contact	Normally-open contact
Connection	250 V AC, 3 A
Connection	24 V DC, 2 A ... 240 V, 0.16 A
Function	Parameterisable
External 24 V DC supply	
	To support communication when the 400 V is switched off
Internal 24 V DC supply	
	Max. 100 mA for inputs/outputs and sensor feeds
Interfaces	
Extensions	Fieldbus via Communication Unit
Safety technology	Dual-channel STO input
Drive interface	
Encoder input	via 2 digital inputs, HTL, 2-track, 10 kHz



Terminal box position

Connection positions

Connection designation



The basic design of the Communication Units includes standard positions for the M-12 connector. These can be seen in the respective data tables on the following pages.

Safety technology

The "safe torque off (STO)" safety function can be integrated into the Communication Unit in addition to the communication module. This combination is available with any fieldbus.

Communication module	AS-interface STO	CANopen STO	EtherCAT STO	EtherNet/IP STO	PROFIBUS STO	PROFINET STO

Communication module AS-Interface (AS-i)

The AS-Interface communication module enables you to control the 8400 motec using digital control signals. The AS-i bus system has become the established solution for transferring digital signals on the lowest field level. It is designed for applications that do not require the use of powerful fieldbus systems.
The advantages of this system are:

- Easy handling and commissioning
- Reduction in wiring complexity
- Easy integration into existing systems
- Cost reductions

CANopen communication module

The CANopen communication module allows you to control the 8400 motec by sending digital control signals via the "CANopen" bus system.
The advantages of this system are:
- Straightforward, yet extremely powerful, bus system
- Cost-effective
- Easy system integration, as there is a wide range of sensors and actuators available on the market.

EtherCAT® communication module

With the communication module EtherCAT®, the Inverter Drives 8400 motec support continuous communication from the field level to the company management level.
The advantages of this system are:
- Use of IT standards
- Integrated switch allows direct looping of EtherCAT® via the inverters
- Integrated I/O node. Capable of communication and reading inputs even when the 400 V supply is switched off.
- Option for connecting a 24 V supply

EtherNet/IP communication module

The EtherNet/IP communication module based on standard TCP and UDP enables the Inverter Dives 8400 motec to support continuous communication from the field level right through to the controlling system.
The advantages of this system are:

- Currently widespread fieldbus based on real time Ethernet
- Supports DHCP and BootP in allocating the IP address
- Devices linked via EtherNet/IP can be implemented seamlessly and with minimum configuration effort via mapping into the I/O tree of the RSLogix programming tool.

Wiring Unit for motor mounting

The Wiring Unit forms the interface between the various Lenze motors and inverters. In addition to this, it provides the flexibility in terms of connection options for mains connection, motor, brake and brake resistor.
The Wiring Unit also acts as a holder for various additional modules such as:

- Q5/0 plug-in module
  as Q5/0 plug connection or loop-through connection
- Q4/2 plug-in module
  as Q4/2 plug connection or loop-through connection
- Q8/0 Wiring Unit plug-in module
  as Q8/0 plug connection
  for the motor when wall mounted
- Quick-On connector for mains connection
- Attachable external brake resistor
  for braking operation via the integrated brake chopper

Frame Unit without switch 0.37 to 3.0 kW (field package)

The Frame Unit without switch is a simple wiring and switch box for wall mounting and power class up to 3.0 kW. The Frame Unit without switch is available in 4 versions:

- In cable gland version
- In connector version, 1 x Quick-On for mains connection and 1 x HAN Q8 for motor connection
- With integrated brake resistor up to 30 watts with cable gland or connector

Wall mounting 4.0 to 7.5 kW (field package without switch)

Wall mounting is used for the field package without switch, type 3, 4.0 to 7.5 kW. The wall mounting kit can either be purchased as a separate component or as part of a complete field package.
The drive unit of the 8400 motec can be mounted directly on the wall mounting and meets degree of protection IP65.

Wall mounting

			• Degree of protection IP65 • Easy installation For • E84DGDVB5524PS • E84DGDVB7524PS

Frame Unit with switch for wall mounting

The Frame Unit with switch is a wiring and switch box for wall mounting and power class up to 3.0 kW. The Frame Unit with switch is available in the following combinations:

- In cable gland version
- In connector version, 2 x HAN Q4/2 for mains loops and 1 x HAN Q8 for motor connection
- With main switch
- With main switch and control elements
- With motor protection switch
- With integrated 15 watt brake resistor

Overview of possible components of the 8400 motec system

Drive Unit

USB diagnostic adapter - E94AZCUS

Diagnosis terminal - EZAEBK2003

Memory module - E84AYM205/M

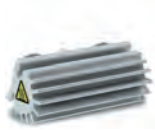
Communication Unit

M-12 connector - EZAEVE013/M

Switch/potentiometer unit, connection via B-side - E82ZBU

Wiring Unit

External brake resistor



External brake resistor, can be mounted on the left or right of the wiring unit

Connector, can be mounted on left or right

Mounted on geared motor

Memory module

All device settings for the 8400 are stored on a pluggable memory chip, the memory module. The memory module ensures that drives can be replaced quickly and without errors being made.

Mode	Features	Product key
Memory module	• For 8400 BaseLine, 8400 motec • Packaging unit: 12 pcs.	E84AYM20S/M

M-12 connector

The M-12 plug-in connector can easily be added by breaking open the cutouts in the communication unit. The communication unit is wired by means of plug-in terminals. This means additional I/Os can also be plugged in.

Mode	Features	Product key
M-12 connector	• A-coded, 5-pin, female • Packaging unit: 5 pcs.	EZAEVE013/M

Plug-in module

Screwed sockets for the mains connection are included on the Inverter Drives 8400 motec as standard. Alternatively, Q4, Q5 or Q8 plug-in modules can be used. Thanks to the universal connection options offered by the modules, a supply bus can be set up using plugs and couplings without the need for any external accessories.

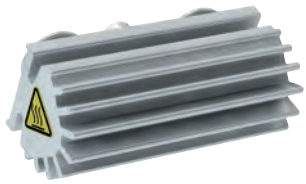
Plugs

Mode	Illustrations	Features	Product key
Plug-in module 1 x Q5/0 left		• Applications with external mains distributor • 5 power contacts and PE: 16 A / 400 V	E84DZEVBLANP
Plug-in module 1 x Q5/0 right			E84DZEVBRANP

Mode	Illustrations	Features	Product key
Plug-in module 2 x Q5/0 left		• Applications with mains loops • 5 power contacts and PE: 16 A / 400 V	E84DZEVBLAFP
Plug-in module 2 x Q5/0 right			E84DZEVBRAFP
Plug-in module 1 x Q4/2 left		• Applications with external mains distributor • 4 power contacts and PE: 32 A / 400 V • 2 control contacts: 10 A / 24 V	E84DZEVBLPNP
Plug-in module 1 x Q4/2 right			E84DZEVBRPNP
Plug-in module 2 x Q4/2 left		• Applications with mains loops • 4 power contacts and PE: 32 A / 400 V • 2 control contacts: 10 A / 24 V	E84DZEVBLPRP
Plug-in module 2 x Q4/2 right			E84DZEVBRPRP
Plug-in module 1 x Q8/0 left		• Applications with 8400 motec in wall mounting • 8 power contacts and PE: 16 A / 400 V • Not suitable for rated power of 9.2 kW	E84DZEVBLCNP
Plug-in module 1 x Q8/0 right			E84DZEVBRCNP
Plug-in module 1 x Q8/0 left 1 x Quickon		• Applications with 8400 motec in wall mounting • Motor: 8 power contacts and PE: 16 A / 400 V • Mains: 3 power contacts and PE • Not suitable for rated power of 9.2 kW	E84DZEVBLCSP
Quick-on connector		• Applications with simple mains connection directly on the wiring unit • For all sizes, 20 A / 690 V (UL: 15 A / 690 V)	EWS0092

Brake resistors

In order to decelerate higher moments of inertia or run in generator mode for longer periods of time, an external brake resistor is required. The resistor converts braking energy into heat. In addition to the optionally integrated 15/30 watt brake resistors in the field package, the following brake resistors are available.



External brake resistor

External brake resistor mounted on the wiring unit

An external brake resistor can be mounted on the side of the 8400 motec wiring unit or drive unit instead of the plug-in modules or cable gland.

Typical motor power	Mains voltage	Brake resistor	Rated resistor	Rated power	Thermal capacity
4-pole asynchronous motor					
P	U_{AC}		R_N	P_N	C_{th}
[kW]	[V]		[Ω]	[W]	[kWs]

5.50					
7.50					

4.2

External brake resistor

The brake resistors recommended in the table below have been dimensioned for approx. 1.5 times the regenerative power, with a cycle time of 15/135 s (brake/rest ratio). These brake resistors generally meet the usual requirements of standard applications.

The brake resistors are fitted with a thermostat (potential-free normally-closed contact). The resistors meet IP65 (EN 60529) or type 4 (NEMA 250).

Brake resistor

Typical motor power	Mains voltage	Brake resistor	Rated resistor	Rated power	Thermal capacity	Dimensions	Mass
4-pole asynchronous motor							
P	U_{AC}		R_N	P_N	C_{th}	h x w x d	m
[kW]	[V]		[Ω]	[W]	[kWs]	[mm]	[kg]

7.50							

USB diagnostic adapter

The diagnosis terminal or a PC can be used to operate, parameterise and diagnose the Inverter Drives 8400 motec via the L-force diagnostic interface. A PC can be connected via the USB interface and the USB diagnostic adapter.

For connecting the USB diagnostic adapter to the L-force diagnostics interface (DIAG) on the inverter, three different cable lengths of 2.5 m, 5 m and 10 m are available separately. The 'EASY Starter' or 'Engineer" engineering tools can be used to operate, parameterise and diagnose the inverters. Both tools have simple intuitive interfaces. This enables e.g. quick and easy commissioning.

Instead of the USB diagnostic adapter, the PC system bus adapter can be used. This necessitates a CANopen interface on the inverter.

- The 'EASY Starter' or 'Engineer' engineering tools are used to operate, parameterise and diagnose the inverters.

USB diagnostic adapter incl. connecting cable to PC

Mode		Features	Product key
USB diagnostic adapter		• Input side voltage supply via USB connection from PC • Output-side voltage supply via inverter's diagnostic interface • Diagnostic LEDs • Electrical isolation of PC and inverters • Supports hot plugging	E94AZCUS

Connecting cables for USB diagnostic adapter

Mode	Features	Product key
Connecting cable for USB diagnostic adapter	• Length: 2.5 m	EWL0070
	• Length: 5 m	EWL0071
	• Length: 10 m	EWL0072

Diagnosis terminal

The diagnosis terminal can be used as an alternative to a PC if you are looking for an easy way to operate the inverter, set parameters or carry out diagnostics locally. The structured menus and plain text display provide quick access to data.
The diagnosis terminal can be plugged into the inverter's L-force diagnostic interface from the outside.

Diagnosis terminal

Mode	Features	Slot	Product key
Diagnosis terminal	• Diagnosis terminal in a robust housing • Incl. 2.5 m cable • Degree of protection IP20 • For 8400 motec and protec.	Diagnostic interface	EZAEBK2003

Switch/potentiometer unit

The switch/potentiometer unit is fitted directly to the 8400 motec or in a different position within the system. An analogue setpoint can be specified with the switch/potentiometer unit and the control connections integrated in the inverter by using the integrated potentiometer; the rotary switch can, for example, be used to start/stop the drive or change the direction of rotation.
The switch/potentiometer unit is supplied with a 2.5 m connection cable.

Switch/potentiometer unit

Mode	Product key
Switch/potentiometer unit (IP65)	E82ZBU

Motor mounting set

The components for motor mounting are supplied as a set.
A set comprises:
- Drive Unit
- Communication Unit
- Wiring Unit

Relevant accessories can be used to equip components to suit the application. They comprise:
- Connectors
- External brake resistors

The motor mounting units are customised by default for Lenze motor types 063 to 132, 0.37 to 7.5 kW.
The different units can be used in any desired combination within the power increments. This allows all connections to be implemented via cable glands and/or pluggable connectors. The seal to the terminal box supplied with the motor is used as the seal between the wiring unit and the motor.

Field package without switch

In the cable gland version, the components for wall mounting from 0.37 to 3.0 kW are supplied as a set.
One set consists of individually packed boxes:

- Drive Unit
- Communication Unit
- Frame Unit without switch

In the cable gland version, the components for wall mounting from 4.0 to 7.5 kW are supplied as a set.
One set consists of individually packed boxes:

- Drive Unit
- Communication Unit
- Wall mount

The 0.37 to 7.5 kW type with plug-in connector is supplied in one completely mounted unit as a drive packet. The field package (0.37 to 3.0 kW) can be ordered with an internal brake resistor with 90 ohms, 30 W, 0.3 kW.
